Translation: French » English

Figure 13a represents another variant in which we find the prisms 21 and 22 of triangular cross-section rectangle but they have a complementary triangle, respectively 72 and 73, so that the prism and form an attachment parallelepiped rectangle. The indices of four triangles 21, 22, 72 and 73 can be different. In a preferred embodiment, the indices of the parts 72 and 73 are neighbors of the selected index of air. The advantage of this variant is that it avoids the turbulence aero-dynamic.
